

**Dry Ice Blast Cleaning** is the safe alternative to sand, bead, soda, and water blasting. The dry ice (CO<sub>2</sub>) media disappears on contact with the surface being cleaned, leaving no residue. Typical cleaning problems in an industrial environment are continual. The need to reduce downtime, the desire to eliminate tool wear, or reduce the use of hazardous solvents are all factors affecting day to day operations. Dry ice blasting offers significant benefits that have markedly improved cleaning practices for many companies in a broad range of industries throughout the world. This has resulted in considerable increases in productivity and product quality, as well as substantial bottom line savings.

**COOL BLAST EQUIPMENT COMPANY** is the leader in providing CO<sub>2</sub> blast cleaning technology to industry in the Southeastern United States. We offer sales of new, used, and factory refurbished blasters, as well as short term & long term rentals, parts, service, consulting & contractor referral services, and dry ice. Contact us today and ask about our *no cost / no obligation site survey & product demonstration*.

**CB-110 Dry Ice Cleaning System**  
*Economical, powerful, easy to use*  
*Stainless steel / 100% pneumatic*
