

# DRY ICE BLAST CLEANING

## The *Cool* Alternative

### Reduce Project Time and Labor Costs

Dry ice blasting makes it easy to clean up commercial & industrial applications. Jobs that normally required weeks now only take hours or days to complete. This unique *gas flushing* action eliminates wear and damage created by sand and grit blasters. Reduce, or eliminate your usage of solvents and avoid the mess created by water, steam, nutshell, corncob, and soda blasting. The process is aggressive enough to remove years of dried ink buildup from industrial printing equipment, yet gentle enough to be used on electric motor windings.

### What can be Cleaned

**Remove** – dirt, grease, oil, ink, coatings, glue, dust, bacteria, mold, smoke/soot, food residue, sticky build ups, carbonized residues, surface rust, loose flaking paint, lead paint, release paints, sealants, hydraulic fluids, various foams & insulation, and many more.

**From** – machinery, tooling, concrete, tanks, ovens, dryers, conveyors, robotics, floors, walls, ceilings, pipes, duct work, printing & packaging equipment, electrical panels, electric motor windings, generators, sanding belts, and more.

*Below: Top end of Harris Web press, before and after blasting. Time to clean: 20 minutes.*

### Easy Choices

We provide complete dry ice blasting systems to the entire Southeastern USA and offer these diverse services to fit your needs:

- New and Used Machine Sales
- Repair and Rebuilding Service
- On-Site Training
- Dry Ice Sales
- Short Term Rentals
- Rent to Own Programs
- Contract Cleaning
- Turn-key Subcontracting
